## Reagan economist favors land transfer

A group representing livestock producers who use federal lands said a White House economist told its members recently that he supports the transfer of federal lands to the private sector, reports CNS.

The Public Lands Council said Steve Hanke, sonior economist for the President's Council of Economic Advisers, recently said that public-lands should be transferred to "present usors" by a capitalization of the present value of annual fees paid by these users over a period of

Hanke reportedly told the group that private ownership would lead to more efficient and productive use of the approximately 147 million acres of public lands now under control of the federal government. However, the Public Lands Council said Hanke noted that his views on the subject differed substantially from those of Interior Secretary James Watt, whose department regulates the

use of those lands. Control over federal lands has been a major concern of the U.S. livestock industry because the economic viability of many Western livestock operations is dependent on grazing such lands. An estimated 20% of the cattle entering U.S. feed lots each year have been grazed on federal lands, according to the National Cattlemen's Assn.

Livestock interests have been active in the so-called Sagebrush Rebellion—a Western movement whose goal has been to bring about transfer of federal lands to state control. However, transfer of federal lands to the private sector would go beyond the aims of that movement, already a target of criticism from environmental and con-

## Industry supports USDA salt plan

Meat industry firms both processors and congenerally responded sumers but asked that it be favorably to a USDA pro- expanded to permit the use posal that would permit the use of potassium and poultry products, reports CNS.

Under the proposal, processors would be allowed to use potassium phosphate salts—such as dipotassium phosphate and potassium pyrophosphate—in all meat and poultry products in which USDA now permits use of sodium salt.

The proposal would also allow meat and poultry processors to use sodium hydroxide in their product formulations to control acidity. Meat processors would also be permitted to use phosphates-which enable meat products to retain their flavor, juiciness and tenderness during cooking—in most meat products other than sausages. The National Meat Assn.

(NMA) said adoption of the sidered a major source of proposal would benefit dietary sodium.

of phosphates in sausages. Since USDA stricity regulates the fat and moisture content in processed meats, there would be no reason to prohibit phosphate use in sausages

as a means of preventing

excessive moisture loss,

NMA said.

A few meat processing firms, such as Oscar Mayer Inc., Madison, Wis., told USDA that the proposal would help the meat industry reduce the amount of sodium it uses in processed meat products. USDA has been encouraging processors to look for ways of decreasing the sodium content of their products because of the link established between high sodium intake and hypertension, a form of high blood pressure. Among processed foods, processed meats are con-

### Cattlemen meet with FRB head

(Continued from page 1) order to make him aware of the devastating effects of high interest rates on the cattle industry. The cattlemen did not ask for special treatment, but they did emphasize the need for consistent fiscal and monetary policies, avoiding extremely high rates of the past two years.

NCA previously has called for policies which will maintain necessary restraint on the money supply but which will permit interest rates to decline evenly over the next several months.

"NCA consistently has said that inflation is our biggest problem,''

The cattlemen explained to Volcker that high interest rates are a major reason for industry unprofitability during the past two years. Unlike most margin-added busito pass on today's high interest costs—costs which have risen by more than 300% since 1976. Total interest costs (for both producers and feeders) now represent about 16% of fed steer prices—which is equivalent to \$0.25-0.27 per lb. of beef at retail.

Between 1979 and mid-1981, retail beef prices increased 4% while fed steer prices decreased 4%; yearling feeder cattle prices decreased 18%; and calf prices decreased 22%. At the same time, the Consumer Price Index rose by almost a third, and interest rates rose by two thirds.

for your beef cattle feed.

adds the proteins, nutrients. vitamins, and minerals needed to balance your cattle feeding program, and helps your cattle get more of the usable energy out of their roughage. So you not only get healthler livestock. you use your pastures and feed crops more efficiently. Both ways, a better payoff.

grazing often is available. National Milk Producer's Federation Economist John Mengel told CNS he expects a very gradual drawdown in dairy cattle over the past few favorable feed prices might offset some of the legislation's impact on U.S. Milk production in the short

## Japan's production ud over last vear

Japan's July processed meat production rose 0.5% over a year ago to 36,259 tons, officials of the Japan Meat Processors Assn. said ecently, reports UCN.

Meanwhile, July's processor offtake fell 7.5% from a year ago to 29,729 tons, the third consecutive monthly drop, according to officials of the Ministry of Agriculture, Forestry and Fisheries (MAFF).

During the month, ham production rose 8.9% to 7,344 tons. Bacon also rose 6.5% to 2,787 tons. Sausage production rose 3.3% to 15,217 tons.

The MAFF officials said pork shipments to proessors during the month totaled 21,511 tons, down

Beef totaled 1,077% tons, up 2.1% Imports totaled 970 tons, up 4.5%, and domestic 107 tons, down 15.7%.

Horse meat totaled 2,841 tons, down 14.5%, all imported. Sheep meat totaled 4,297 tons, down 12.3%,

during NALJA's annual open meeting, held in Des Moines, Iowa, in conjunction with the National Junior Limousin Heifer Show. NALJA is the national organization for Limousin cattle breeders under 21 years old and numbers more than 1,500 members.

### **Bull Test Assn.** ready for '81-'82

The Southeast Colorado Bull Test Assn. is ready for the start of the 1981-1982 test. The date for participants to deliver bulls to the Colorado Beef Producers Research facility is Wednesday, Oct. 21. They will go through a 3 week adjustment period, then be weighed in for the beginning of the official 140 lb. gain period on Nov. 10-11. The Southwest Colorado Bull Test is conducted by a non-profit organization of producers in cooperation with the Colorado State University Extension Service. William Piper, Springfield, is president of the association. Extension agents working with the program are George Ellicott, Eads, and Leonard Pruett, Spring-

The test program is open to all breeds of bulls, and is not limited to any specific geographical area. Last year, breeders were included from Kansas, Oklahoma, and nearly all parts of Colorado.

Directors of the association anticipated the number of entries would be similar to last year, or about 100 to 150 bulls. As of Oct. 1, however, many preeders had not yet sent their applications in. Producers who are interested, but have either failed to send entry forms by the due date, or did not receive information on the test. should contact either George Ellicott, Eads office phone 438-5821 or Bill Piper Springfield phone 3866121 As soon as possi-uls

## Plains residents find groundwater declining

As groundwater supplies on the High Plains decline, residents of the region will find their bank accounts dwindling as well.

That is the conclusion of Texas Toch University agricultural economist Arthur L. Stoecker, who is conducting an input-output study on the impact of High Plains irrigation.

The 50% of the region's million cultivated acres now under irrigation produces two-thirds of the value of High Plains crop production. As water avail ability decreases and that production declines, all sectors of the High Plains economy, not just agriculture, will be adversely af-

"Each dollar of output from irrigated agricultural production results in three dollars of total output in the High Plains economy, Stoecker said. "The output includes further processing of products, plus the out-put generated in fertilizer sales and credit sorvices."

A decline in production from irrigated cropland results in a decline in the total output of economy, Stoecker said.

"The impact would be most directly felt by households, processors of agricultural chemicals, producers of agricultural chemicals, utilities companies, and banking and credit institutions," the agricultural economist ex-

Stoecker holds a joint ap-cointment with Texas Tech Iniversity and the Texas Agricultural Experiment Station in Lubbock.

Using 1977 as the base year, he has constructed a model of the High Plains economy, based on a survey of area business firms. Information on the economic output of these firms was compared with expenditures for raw materials and unfinished goods to determine interrelationships with the farm sector and other segments of the

The results of Stoecker's 1977 economic model study will be used by the Texas Department of Water Resources to make regional projections of the economic impact caused by changes in irrigation and in petroleum and natural gas production. Those projections, in turn, will be given to the High Plains Study Council and to the Ecoministration of the U.S. Department of Commerce. which is assessing the impact of changes in agricultural and petroleum production for the six-state area sharing the Ogellala Aquifer. Affected states are Texas, New Mexico. Oklahoma, Kansas, Nebraska and Colorado.

"Land, groundwater and petroleum are the three basic natural resources of the area," Stoecker said.

The 54 county area that Stocker and research associates Jos L. Lovell, Eluned Jones, David R. Booth and David A. Pyles studied extends from the Taxas-Oklahoma line Rever counties and in Angus Beefmaster Universal Brahman Brangus Charolais Hereford Limited and Inc.

Angus Beefmaster Universal Brahman Brangus Charolais Hereford Limited and Inc.

The angus Brahman Brangus Charolais Hereford Limited Brahman Brahman

Lubbock, Amarillo, Mid land and Odessa. Of the region's total work force, 11% is directly employed in agriculture and 19% is involved in the production of inputs for agriculture or the processing and trading agricultural products, Stoccker said.

Approximately 30% of the area's manufacturing is related to processing of agricultural products, including textiles, meat, food and grain.

The Texas Tech researcher pointed out that although the 54-county region lost 34,000 people between 1960 and 1970, the '70s saw an increase of 50,000 residents.

"A major source of growth in the last 10 years was the development of the irrigated feed grains-feedlot-meat processing complex within a triangle running from Lubbock to Muleshoe to Amarillo," Stoecker said. "Of the region's 65,000 new jobs created in 1967-77, more were created in meat processing than in any other industry.

He traced the construction of new feedlots and ment packing plants to the availability of feed grains

"The seven or eight top Texas counties in agricultural receipts are in this triangle, and they produce a very significant part of total agricultural production in Texas," Stoecker

"Previous projections have shown that, under current practices, by the year 2000 irrigation will have decreased in this area 50%, which means a decline in crop production of \$300 million in 1977 dollars. This is a total decline in the economy of \$900 million.

"We do not have to have total decline in the economy, if we continue to increase the efficiency of the water we use in agriculture and if we use our current economic base to attract industries which are less dependent on irrigated agriculture,' Stoecker said.

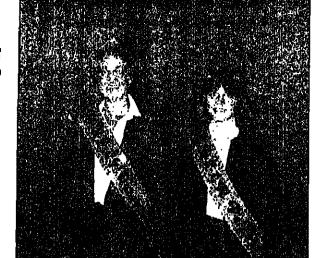

A decline of 50% in irrigated agricultural production would result in a direct loss of 7000 jobs and a total loss of about 18,000 ioba, he said.

"This is how the economy will go if we do not alter our production technition," Stoecker predicted.

### U.S. to conduct test for mutton

U.S. officials are testing a shipment of Australian beef believed to have been substituted with mutton, a senior Australian government official confirmed, reports UCN.

The official said the Australian government has suspended the registration the Austrelian facility where the shipment originsted. But he refused to give the name of the facility or its location pending the results of the U.S. test.

QUEEN & PRINCESS-Sara Doornbos, Scott City, was recently selected to represent the Kansas Junior Livestock Assn. as queen for the coming year. She was elected at the group's annual meeting held in conjunction with the Kansas Junior Livestock Show in Wichita. Angela Markley, Mound City, was selected to represent the KJLA as princess for the next year.

### **Bankers forecast** credit conditions

Farm borrowers face greater risk exposure, a more segmented and specialized londing market, and tighter cash management requirements in the changing agricultural credit market, bankers

said, reports CNS. Addressing a group of community bankers at a session of the American Bankers Assn. conference in San Francisco recently, speakers said volatile interest rates and financial market deregulation have and will continue to alter lending practices. Leslie Peterson, presi-

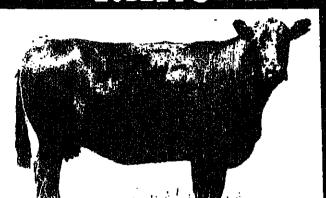

dent of the Farmers State Bank in Trimont, Minn. and past chairman of the ARA's Agricultural Banking Division, said rising costs of funds and service costs and tightoning of government lending practices will force farmers to enhance internal cash flows to reduce borrowing needs

The widespread use of variable rate loans requiring the farmer to take on the risk of interest rate volatility already have placed a profit burden on borrowers, said Poterson. Farmers State is one of bout 7,500 community banks which provide roughly 40% of all agricul-tural lending in the U.S.

Walter Minger, senior vice president at the Bank of America, the nation's largest and whose individual agricultural borrowing accounts are as large as \$50 million, said farm lenders are tending toward becoming simply

Minger, also a past chairman of the ARA Agricultural Banking Division, and lenders are having to place more emphasis on "crisis management"—tuk-ing care of clients with possibly too much credit-rather than seeking new loans.

This role for could become even more mportant if inflation declines, which would slow the erosion of outstanding loan values and put even more pressure on heavily ndebted farmers, Peterson

Leaders ... in the production of Black Limousin

The Nielsen Ranches, Inc. Limousin herd is the argest black Limousin cow herd in the United States and tops in quality as well. This high numbered herd of black Limousin females is complimented by the use of the largest herd bull battery in the Industry. Many of these plack herd stres are double-bred black and carry some of the most popular pedigrees in the breed today.

The Nielsen Limousin herd is managed as a working row herd, culling as good cowmen do, and paying strict attention to fertility and calving at two years of age and nost important, carry the Nielsen stamp of quality.

The majority of the sale offering is black and/or carrying the service of double-bred black sires. The offering is selected from a purebred Limousin herd that is totally committed to the black color and the females are highly productive and ranch raised.

Another positive factor

staple in the Southeastern diet." Nickels said. "Consumption here probably is 1% to 2% higher per capita than in other regions."

Nickels and Rawls agreed that hog production in the Southeast will never mirror that of the Corn Belt's and admitted that hog purchases in the nossee at Knoxville. Southeast mostly are to Farrow-to-finish producers supplement purchases in Tennessee usually

If hog prices remain pro-

Southeastern hog producers are still at a disadvantage because of grain transportation costs,

positive variables, many producers there could survive transportation costs Marginal producers were and interest rates and the Corn Belt could have some forced out of business last year, Nickels said. "We lost "stiff competition from the Southeast," Grimes said. \$28 million in the hog industry because of aflatoxin

for Southeastern log pro-ducers is that demand for fresh pork and pork products is higher there than in other parts of the country, Nickels said.

"Pork typically is a

## **Baker receives animal** industry service award

Dr. Frank Baker has administrator and his serbeen named recipient of the vice on many regional, na-1981 Animal Industry Sertional and international vice Award for his dedica- committees and task tion to the animal science industry. He is director of International Programs in Agriculture at Oklahoma State University, with a joint appointment in the Animal Science Department as extension beef cattle specialist.

Dr. Baker's selection as recipient of the annual award was announced to members of the American Society of Animal Science (ASAS) during the society's annual meeting held recently at North Carolina State University,

Dr. Baker has a long and impressive list of research, extension and popular publications. However. perhaps his greatest contributions to the livestock industry have been as an

PACKERS CONTINUE TO CHIP away at the cash cuttle market while complaining about the yield grade 4 problem, a boxed beef backlog and inadequate weekly direct trade volume. While feedlots admit to some over-fat cattle, they argue it is no way as serious as the one in February and suggest packers more than likely are blowing the situation out of proportion to drive prices lower.

Also bothering feeders is the fact packers do not appear to be buying many cattle on a weekly basis. Although beef \$52-53.10. Md. frame 1-2 300-500 slaughter is down, feeders believe packers are slaughterlb. \$50-52.50; 500-700 lb. \$49-51.50. ing more cattle than they are buying. A CONTRACTOR OF THE CONTRACTOR

ANOTHER NEGATIVE FACTOR influencing cash cattle prices is the backlog of boxed beef, Choice, YG-3 steer corcasses closed Tuesday at \$99, down \$1.2 from Monday's close. Market sources reported prices could drop to \$97 unless boxed beef movement is large. The estimated carcaes value Tuesday was \$103.89, down \$2.36 from the week ago. Some sources said retail clearance of beef was above average, but others said it was adequate at best. Regardless, retailers need to buy beef this week. However, since beef prices have been trending downward, retailers could be waiting for them to bot. tom Hog packers took advantage of the combination of profitable margins and large numbers of hogs, and Tuesday's federally inspected slaughter was a whopping 368,000 head. Fresh pork prices could be pressured as Shu out need Prest pork prices could be pressured as 2 much as \$2.4 by Friday because of the large kills market Carr, Colorado 8U672 southe said

GATT to shelve debate during review of DISC

The U.S. will receive no The Dutch spokesman pressure from the General said the EEC's complaint Agreement on Tariffs and against DISC has been Trade (GATT) as it con- more pressing because the tinues to review its program, which lets Us Domestic International exporting firms defer pkg. Sales Corp. program, according to sources.

The GATT council recently decided to shelve debate on the DISC program, which the European Economic Community has charged is an export subsidy plan, and therefore in violation of GAT"I"s free trade rules, reports UCN.

The council also deferred discussion of U.S. countercharges that the Belgian, Dutch and French governments were doing the same.

The council decided to resume the discussions when it meets again Nov. 3. state sale of state in However, al the main participants in the dispute say they believed the matter will be settled before then. A Dutch spokeman, who

is close to the EEC negotiating team and has been involved in the controversy since it began in 1976, said, "There is no future in arguing about this in public anymore." He said, "We hope negotiations between us and the U.S. will resolve the matter before the GATT council

meets again." However, the Dutch spokesman said he was not overly impressed by suggestions that the Reagan administration is about to legislate DISC out of ex-

istence. "The Carter administration promised the same thing, but nothing happened," he said.

against other competitors **Meat legislation** awaiting sponsor The National Assa. of State Departments of Agriculture (NASDA) still in looking for a sponsor for its

spected meat, a NASDA of ficial told CNS. Under that proposal state-inspected meat would carry an official marking identifying the state in which it was inspected. The proposal would not permit state-inspected meat to be sold in foreign markets.

logislative proposal that

would permit the inter-

ment of taxes on income

carned in foreign opera-

tions, does not require par

ticipants to pay interest or

the deferred sums, thus

giving them an edge

Under current law, staterun meat inspection programs are required to operate under standards at least equal to those of federal inspection. However, that law stimpulates that state- inspected meat may only be marketed in side that state.

USDA generally supports the NASDA proposal as a means of keeping the approximately 30 states now conducting meat inspections from shutting down those programs. When a state terminates its inspection program, USDA is obligated by law to assume the inspection duties.

Over the past few years an increasing number of state meat inspection pregrams have succumed to efforts by state legislators to trim fiscal budgets. USDA's Food Safety and Inspection Service, faced with an austerity budget in fiscal 1982, would prefer to halt that trend by allowing inter-state sale of meat, in order to prevent further pressure on its budget.

# Sugar substitute to make an appearance on market soon

six months.

Aspartame, to be marketed under the trade name "Equal" by G.D. Searle Co., was approved recently by the Food and Drug Administration.

The new product is made up mainly of two amino acids, phenylalanine and aspartic acid, points out Al Wagner, food technologist

be on the market in about System. These, along with other amino acids, are the normal building blocks of protein in foods consumed as part of any healthy diet.

Phenylalanine and aspartic acid combined in a certain manner produce an intensely sweet-tasting substance called aspartame that is about 180 times sweeter than sucrose (sugar), says Wagner. According to Wagner.

•Dry, free-flowing sugar

package units not to excood the sweetening equivalent of 2 tsp.'s of ·Sugar substitute for

 Cold breafast cereals. Chewing gum.

•Dry bases beverages; instant coffee contains phenylalanine.

sweetener in the following ducts and toppings.

FDA approval is based substitute for table use in on four additional conditions regarding final product labeling and Searle's record keeping:

for sugar) that the product regulation.

baking must appear on the longed heat, with a consequent loss in sweetness.

•[f a food containing aspartame is represented sweetening hot beverages, warning statement for low-calorie product, the including coffee and tea. phenylketonurics (persons food must be labeled in sensitive to phenylalanine, compliance with FDA's much like diabetics are to special dietary foods

Advantages that asnorlabel. Aspartame breaks tame is supposed to have down when exposed to pro- over non-nutritive sweeteners are that it is virtually indistinguishable from sugar in taste, has no bitter or metallic aftertaste, and •Any food containing to be for special dietary use seems to act like a flavor aspartame must display a as might be expected of a enhancer for some fruits, such as MSG (monosodium glutamate) does for highprotein foods.

A major disadvantage is that it is not stable to heat ·Searle Co. is to monitor for prolonged periods.

# OMB asks agencies to pay suppliers promptly

Office of Management quires them to borrow ing 30-day payment terms (R-Mo.), said recently he and Budget Director David money to finance the as a norm, to designate a still intends to press for tor promptly, reports CNS. requires packers to pay for formance evaluations.

Meat packers and others their livestock within one USDA and defense are government's slowness in specific payment terms in couraged by Stockman's and make the rest wonder paying its bills often re- each purchase contract, us- memo, Sen. John Danforth, what you're up to.
